
Advisory Services

In the commercialization of new technologies, CleanTech Energy is actively involved in all aspects of taking these new products to market including:

- * Market Research and Surveys
- * Product Requirements Refinement
- * Marketing & Sales* Product funding including; grants, angle, venture, mezzanine and later stage * Development Capital
- * Project Financing* Navigating DOE clean tech loan guarantees* Technology Due Diligence

As the technology risks are reduced, CleanTech Energy can bridge the gap with established generation and demand solutions. Often these projects are capital intensive with the need to pursue the more traditional path of; development, corporate or project finance, construction, asset management, operations & Maintenance.

CleanTech Energy integrates the talents of its team and network to deliver business and technical advice for early to late stage firms. Our skills include; management and technical advice, market analysis, financial analysis, and product development management. We work closely with several consulting firms with extensive clean technology experience. Sterling Energy is an example of one firm with extensive supply side renewable energy experience. PE Consulting is one of the firms we partner with on demand side technology evaluations.
