

About Us

Our company is built on the principles of commercializing products that reduce the environmental impact of energy creation and use. We provide the business and technical expertise to solve complex commercialization problems of a wide array of technologies.

As an investor or advisor technologies, we ensure technologies keep on track to market release and acceptance. Emerging technologies and projects that lead to cleaner and more sustainable energy supply and demand are needed in this era of global warming and energy supply constraints.

CleanTech Energy integrates the talents of its team and network to deliver business and technical advice for early to late stage firms. Our skills include; management and technical advice, market analysis, financial analysis, and product development management.

Most investments are confidential. Examples of investments that are in the public include, but are not limited to: Capital Hunter , EnerLynx and PowerPlantPro .
